New facility for new innovation

A new facility was created on L1 for CERi (Centre for Entrepreneurial Research & Innovation), a Start-up Hub with a bold vision to help create a vibrant economic future for Western Australia.

Part of the works included in Ceri Bass was the addition of a new light-well that was cut through the existing stairwell to visually connect floors.

Creating lighting for versatile spaces

LED Linear aluminium ELS Aus-System extrusion through the interior were selected to augment the raw aesthetic of the warehouse. The lighting requirements throughout the interior are variable to accommodate both the formal meeting rooms, casual breakout and informal meeting spaces.

Ligman for exterior

The Ligman in-ground Kios and was chosen for its delicate appeal and ability to blend unnoticeably in with the surrounds of the landscape. Furthermore, the Ligman Matrix was chosen for its wall mounted purpose and the ability to produce varying light effects sanctioning imagination and inspiration to reign in the design of the facility as a whole.

The complete lighting solution

This project truly showcases the true potential and delight the Aus-System has to offer. Monduluce worked closely with all stakeholders in the design and construction process to assist in delivering a complete and successful lighting solution.
